
1. HOW TO USE CHECKLISTS

Safe Sheds, The Shearing Shed Safety Program provides four checklists to use at different times of the shearing season:

Full Assessment Checklist

Growers should use the best practice guide and the full checklist with the five modules at least once a year, preferably early in the off-season to go through the shed and record all issues for resolution. This allows as much time as possible to make all changes and improvements before the next shearing.

Pre-Shearing Checklist

This checklist should be used by a woolgrower and the shearing contractor prior to shearing commencing to assess the safety of the shearing shed and reach agreement between the woolgrower, contractor and shed staff on how any issues found will be dealt with.

Induction Checklist

Used by the employer with the shearing team to ensure all important work practices are identified and that all shed staff are aware of work practices and safety information.

Post Shearing Checklist

This checklist should be used by a woolgrower and the shearing contractor immediately after shearing to report any issues noticed or items broken or damaged during shearing. This allows time before the shearing teams are next in the shed to address issues.
